

Great Plains Power Station

Moose Jaw, Saskatchewan

When SaskPower hired BMcD to build a new 360-megawatt (MW) natural gas plant in Moose Jaw, Saskatchewan, they turned to Supreme Steel for their structural steel needs.

Supreme leveraged our Saskatoon plant, treaty 4 partnerships and longtime provincial supply chain partners to both fabricate and install over 3,000 tonnes of coated steel. Steelwork included major wide flange fabrication, trusses, miscellaneous steel and other structural components. Of interest, Supremes structural program was executed on time despite major global supply chain disruptions and the global pandemic.

Owner: SaskPower

General Contractor: Burns & McDonnell

Sector: Industrial

Region: Saskatchewan

Business: Structural

Service: Supply and Install

Date: 2021-2023

Tonnage: 3100 tonnes

Location: Moose Jaw, Saskatchewan
